

# Career GPS System™

*The Career GPS System™ provides professional growth, personal brand positioning, and a proven process to assure success. This is a complete system where you are in the driver's seat.*

*"I sought Julie out when I wanted to pivot my career, re-define my professional vision and better understand where I could make a real difference in the community. With her guidance I was able to identify these things and more. Julie helped me see and understand my core strengths, values, 'superpowers', and professional interests in ways no other training had. This training offered a framework that challenges participants to explore what is possible and dive deep within themselves to discover what they want most from career and life. I went through a series of great exercises with Julie, which helped me envision a better path forward. If you are interested in knowing yourself better and want to grow, change and/or pivot your career – I wholeheartedly recommend this training."*

*“For all of you job-seekers out there, I want to tell you that a good career coach can make a huge difference in your job search; in the jobs and employers you target, in how you interview, and in where you eventually land your next job... the most significant benefit of a career coach is getting the critical ‘reboot’ or recharge during your search from a professional that is in your corner. A job search can be a marathon – challenging and exhausting, as well as exhilarating. Like any athlete, having a coach can help you manage the rough stretches, focus your energies, improve your skills, and help make you the success you want to be.”*
